

(254) 592-7827

PO Box 693 ~ Proctor, TX 76468

DNA sampling:

We need 30-50 pulled mane or tail hairs with the root follicle attached. You may use either mane, tail or both, whichever is easier. Hairs must be pulled straight out to ensure follicles come out of the skin. It may be best to pull 5-10 hairs at a time rather than larger amounts. To submit, fill out known information about the horse on the form provided. The information is the type that would be on a registration paper. At the bottom of the form, tape the hair sample to the paper with clear tape. Do not tape over follicles. Extra hair can be trimmed or coiled. If sending multiple samples, use a separate form for each animal. Place each sample in an individual envelop and put all envelops in a larger envelop or box. If any of the parent info is unknown, indicate so or leave blank.

SEE FORM FOR ADDRESS.

Testing is done for identification, parentage, and breed ancestry. The cost for this is included in your animal's registration. In addition, we can do color gene testing and some disease gene typing. Pricing is additional for these, so please inquire.

Please direct any questions to the ADNAR office:

Ph. (254) 592-7827

Email: dna.registry@yahoo.com

Disclaimer: A DNA test of this type is meant to provide one of two things:

1. **Parental verification** (commonly referred to as PV), for one or both parents. In order to accomplish this, the sire and/or dam must have an accessible DNA case number for reference of genetic markers. If he/ she has never been tested and you wish to obtain PV, you will need to purchase an additional test for the horse in question (sire or dam).

OR

2. **Breed analysis**, for horses of unknown or unconfirmed breed(s). This will tell you what breed or breeds are in your horse's ancestry. This will NOT provide any information to specific lineage or tell you who the sire or dam is. While scientifically possible, each breed organization retains ownership to the horse's DNA report. For this reason, the labs cannot legally scan the databases to obtain this information. It further complicates things that different organizations tend to use different labs.
